

Table of Contents

1. Introduction	7
2. Aims and objectives	10
3. Research methods	12
4. General characteristics of the Vistula valley floor	17
4.1. Geomorphology and geological structure	17
4.2. Selected features of the hydrologic system	24
4.3. The Włocławek water barrage	28
5. Morphology of the Vistula channel	31
5.1. Channel type	33
5.2. Channel mesoforms	45
5.3. Selected factors modifying channel morphology	56
5.3.1. Natural factors	56
5.3.2. Artificial factors	61
6. Changes in hydrological regime after river damming	67
6.1. Mean annual water stages	69
6.2. Daily and hourly water stages	72
6.3. Maximum impact range of the dam	76

Table of Contents

7. Changes in bed load transport and its lithological characteristics	84
8. Functioning of the Włocławek reservoir and its morphological consequences	94
8.1. Channel deformations	94
8.1.1. Longitudinal and cross-sectional profile	94
8.1.2. Dynamics of bed load layer thickness changes	108
8.1.3. Changes in water surface slope	111
8.2. Flood plain development	119
9. Summary	125
10. References	129
